Release Notes

Card Expiry Hour

EntraPass 7.00 has now included a hour value for card expiration date. This means that cards can be configured to expire on a specific hour for a specific date. For more information click [here](#).

Windows 10 compatibility

EntraPass 7.00 is compatible with Windows 10 Enterprise.

Wireless Locks are now supported

EntraPass 7.00 has integrated support for wireless door access. Access is controlled though an ASSA ABLOY Aperio hub which is connected to a Kantech access controller (KT-400/KT-1-PCB model). Each controller supports up to 8 wireless hubs. A VC-485 using a straight RS-232 flat cable is required. Each hub supports up to 8 wireless locks. Wireless locks are controlled through a new licenced door feature. For more information click [here](#).

Licensed door feature added

EntraPass 7.00 includes a licensed door feature which supports the addition of third party lock devices. This feature has been used to enable the wireless doors integration.

Shortcut Keys

EntraPass 7.00 incorporates a number of shortcut keys for quick operations. For more information click [here](#).

Controller Firmware Version

The current firmware version of a controller is now displayed in the controller menu. If the controller has not yet been connected this field will be empty. If the controller is offline the field will display the last known firmware version.

Operator picture display

The operator's picture is now displayed when doing manual operations, database modification and viewing events which involved the operator.

Operator card username search auto complete

In the Users/Card menu you can type a name into the **card user name** field. When you begin to type an auto-complete will be displayed to help you find existing card user names. For more information click [here](#).

Export error and system logs to CSV file

The operator can now export error and system logs to a CSV file. For more information click [here](#).

Force operator logout and disable operator

A new EntraPass 7.00 feature includes the facility to force another operator to logout through the Status/Logins window. If you want to stop the operator logging back into the system you can also force logout and disable operator. For more information click [here](#).

Release Notes CE

Windows .NET upgrade

The Active Directory LDAP component which was released in 6.05 requires the .NET framework 4.5 and upper to work properly. EntraPass 7.00 includes .NET version 4.6.1.

Note: The previous version does not get uninstalled.

AD SDK (Software Development Kit) upgrade

EntraPass 7.00 uses the latest version of AD SDK version 4.8.

What's New in EntraPass Web?

Windows 10 compatibility

EntraPass 7.00 is compatible with Windows 10 Enterprise, you need to install it using Internet Explorer.

Customizable Web Login

You can now customize the welcome note and icon for EntraPass Web login. For more information click [here](#).

Update controller firmware through EntraPass Web

An operator can now upgrade a controllers firmware from EntraPass Web if an upgrade is available. This feature can be enabled through the security level menu. For more information click [here](#).

Local date and time

With EntraPass Web operators can perform manual operation from anywhere in world. When an operator requests a report, performs a manual operation or add/edit/delete users, the operators local date and time is sent to the server which is logged .

Better search filter tool

EntraPass Web now supports searching for a user based on any of the users information fields.

New hardware tooltip

An operator can now view the physical address of each hardware device (controller, door, relay, input) in the **hardware setup** menu. The physical address is displayed when you hover over a device using your mouse. The location of the tool tip can be configured to be displayed on the left, right or not displayed.

What's New in EntraPass Go?

New Report page for iOS

The new report page includes a number of improvements to both the interface and functionality. Generating a report involves four simple steps. The first step is to select a report template from the drop-down list. Next set the date parameters, here you have four different time selectors to choose from. The first three time selectors options are a single click operation for reports within the last hour, the last day and the last 3 days. The **custom report** option allows you to select specific dates. Additional quick reports are also available.

The final step is to email the report to anyone already in your **contacts** in either a PDF or Excel format.
